

**SYSTEM AND METHOD OF  
SPREADSHEET-BASED STRING LOCALIZATION**

**ABSTRACT OF THE DISCLOSURE**

The present invention is directed to a system of and method for creating localization data which is used to update instruction manuals, books, and user interfacing portions of computer programs to contain words, phrases, sentences, and paragraphs in local languages when the product is purchased by an individual who desires to look at the information in a language other than the language in which it was created. The invention also includes a system for and a method of tracking and highlighting changes in the localization data to ensure the word or words in the foreign languages remain synchronized with the word or words in the base or original language.
